REC_DS using C_Week 4_COD_Question 3

Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

Write a program to implement a queue using an array and pointers. The program should provide the following functionalities:

Insert an element into the queue.Delete an element from the queue.Display the elements in the queue.

The queue has a maximum capacity of 5 elements. If the queue is full and an insertion is attempted, a "Queue is full" message should be displayed. If the queue is empty and a deletion is attempted, a "Queue is empty" message should be displayed.

Input Format

Each line contains an integer representing the chosen option from 1 to 3.

Option 1: Insert an element into the queue followed by an integer representing the element to be inserted, separated by a space.

Option 2: Delete an element from the queue.

Option 3: Display the elements in the queue.

Output Format

For option 1 (insertion):-

1. The program outputs: "<data> is inserted in the queue." if the data is successfully inserted.
2. "Queue is full." if the queue is already full and cannot accept more elements.

For option 2 (deletion):-

1. The program outputs: "Deleted number is: <data>" if an element is successfully deleted and returns the value of the deleted element.
2. "Queue is empty." if the queue is empty no elements can be deleted.

For option 3 (display):-

1. The program outputs: "Elements in the queue are: <element1> <element2> ... <elementN>" where <element1>, <element2>, ..., <elementN> represent the elements present in the queue.
2. "Queue is empty." if the queue is empty no elements can be displayed.

For invalid options, the program outputs: "Invalid option."

Refer to the sample output for the formatting specifications.

Sample Test Case

Input: 1 10

3
5
Output: 10 is inserted in the queue.
Elements in the queue are: 10
Invalid option.

Answer

```
#include <stdio.h>
#include <stdlib.h>

#define max 5

int queue[max];
int front = -1, rear = -1;

// You are using GCC
/*int insertq(int *data)
{
   //Type your code here
}

int delq()
{
   //Type your code here
}

void display()
{
   //Type your code here
}*/
/*#include <stdio.h>
#include <stdlib.h>
#include <stdbool.h>

#define MAX 5

int queue[MAX];
int front = -1, rear = -1;*/

// Function to check if the queue is full
bool isFull() {
   return rear == max - 1;
```

```
}

bool isEmpty() {
    return front == -1 || front > rear;
}

bool insertq(int *data) {
    if (isFull()) {

        return false;
    }
    if (front == -1) front = 0;
    queue[++rear] = *data;

    return true;
}

bool delq() {
    if (isEmpty()) {
        printf("Queue is empty.\n");
        return false;
    }
    printf("Deleted number is: %d\n", queue[front++]);
    if (isEmpty()) front = rear = -1;
    return true;
}

void display() {
    if (isEmpty()) {
        printf("Queue is empty.\n");
        return;
    }
    printf("Elements in the queue are:");
    for (int i = front; i <= rear; i++) {
        printf(" %d", queue[i]);
    }
    printf("\n");
}

int main()
{
    int data, reply, option;
```

2418O1238

```
    while (1)
    {
        if (scanf("%d", &option) != 1)
            break;
        switch (option)
        {
            case 1:
                if (scanf("%d", &data) != 1)
                    break;
                reply = insertq(&data);
                if (reply == 0)
                    printf("Queue is full.\n");
                else
                    printf("%d is inserted in the queue.\n", data);
                break;
            case 2:
                delq();  //    Called without arguments
                break;
            case 3:
                display();
                break;
            default:
                printf("Invalid option.\n");
                break;
        }
    }
    return 0;
}
```
